

Environmental Product Declaration

RH Logic 400

S-P-00296

This declaration has been compiled by:
IVL Swedish Environmental Research Institute Ltd.

Product description

The model chosen for analysis is the office chair RH Logic 400.

The RH Logic 400 is one of our most popular chair ranges thanks to its ergonomic features and durability. The RH Logic 400 features a high backrest and is based on 2PP, our philosophy of active sitting. The seat includes a layer of wool, which improves ventilation. The RH Logic 400 is simple to adjust and its controls are easily accessed. The angle of the backrest can be adjusted separately, while the chair maintains all of its basic settings even when you use the tilt mechanism.

Manufacturer

RH Chairs is one of northern Europe's leading manufacturers of ergonomic seating. RH Chairs was established in 1977 in Bodafors, in the Swedish province of Småland. Our plant is now located in nearby Nässjö. Today we are established in Norway, Denmark, Finland, the United Kingdom, France and the Netherlands, in addition to Sweden. RH's manufacturing plant in Nässjö is certified in accordance with ISO 9001 and ISO 14001.

RH Environment

RH's environmental work is based on our goal of creating a sustainable society. Our work chairs offer a high level of quality and a long lifetime and are externally tested in accordance with EN 1335 and BS 5459:2. Parts that have become worn out can easily be exchanged, including the seat and back pad. Already at the design stage, we take steps to ensure that future disassembly, sorting of materials and recycling are as simple and complete as possible. The plastic parts are labelled in accordance with ISO 11469.

RH has reviewed energy consumption in production to help lessen the greenhouse effect. We have been able to reduce energy consumption and have switched to a more sustainable method of heating our premises – district heat. We also save resources by using consumable materials, transport and packaging more efficiently. RH imposes environmental requirements on suppliers concerning chemical substances with the purpose of minimising harmful effects to customer health and to the environment from RH's products. The plastics do not, for example, contain PVC, mercury, cadmium, lead, or brominated or chlorinated flame retardants such as PBB or PBDE. No chair parts contain Chromium VI.

Scope of assessment:	Module declaration: from extraction of raw materials to complete seating solutions, including user phase.
Functional unit:	Seating solution manufactured and maintained for 15 years.
Year of study:	2008, with updates 2010.
Data:	Production data from 2007-2008. Site-specific data from suppliers of main parts and from RH Chairs manufacturing
Expected market area:	Europe.

Key environmental indicators per chair

RH Logic 400			Recycling is divided into:	
GWP - Global warming potential	73	kg CO ₂ -equiv.	Energy recovery	9.0 %
Recycled material in RH Logic 400	23	%	Material recycling	91.0 %
			Total	100 %

Material declaration

The RH Logic 400 office chair consists of the materials listed below. The total weight is 21.8 kg (packaging not included in weight).

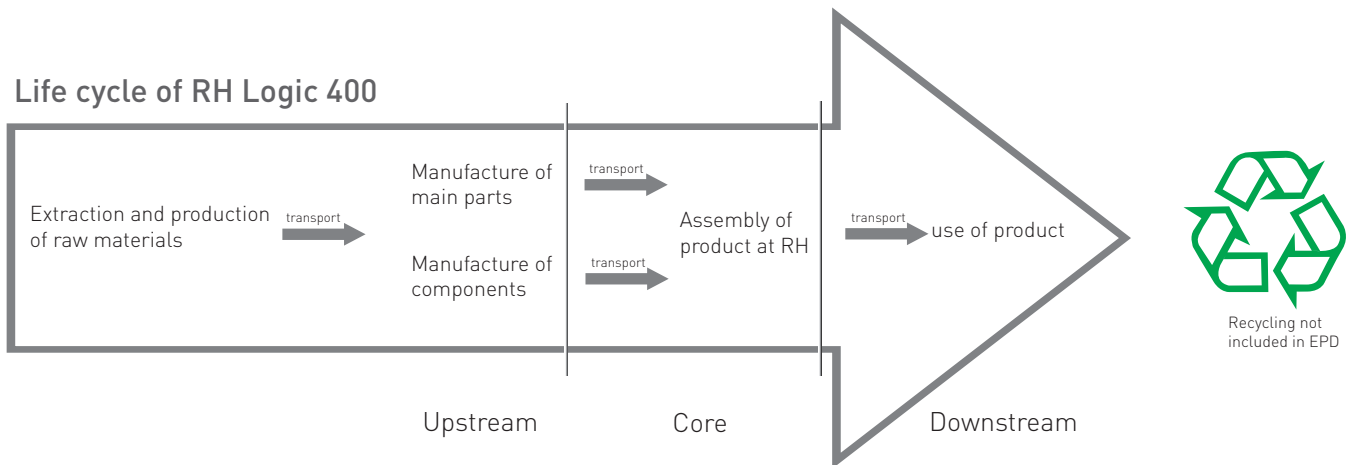

Metals	Weight g	%	Plastics	Weight g	%	Other materials	Weight g	%
Steel	10005	46	PP	4885	22	Other materials	915	4.1
Aluminium	4106	16	PUR	1292	5.9	Packaging	3828	
			Other plastics	1441	5.2			

Environmental performance profile

System boundaries

Presented below is a simplified process chart that shows the studied system and the main system boundaries for the calculation of the environmental performance profiles. The studied system includes production of materials and parts, assembly, transport to retail and the use phase. Transport between the processes and packaging production is also included. The studied system also includes waste from the different lifecycle phases.

Upstream	Core	Downstream	Use of product
<p>- <i>Production of Material and Parts</i></p> <p>The environmental impact from materials extraction and the production of raw materials for all main parts and components is considered. The environmental impact of the manufacturing process for main parts is also included. The environmental impact from the transport of raw materials is included</p>	<p>- <i>Assembly</i></p> <p>All production and assembly processes at RH are considered. The environmental impact from the transport of parts to assembly is included.</p>	<p>- <i>Transport to customer</i></p> <p>transport of the product to the customer is calculated as a 1000 km transport by heavy truck.</p>	<p>No relevant environmental impact occurs during the use of the product.</p>

Material resources

The table below shows the resources used for the manufacturing of RH Logic 400

Resource use in kg	kg
Non-renewable resources	
With energy content	
Crude oil	13
Hard coal	14
Natural gas	7,6
Uranium in ore	3,7E-04
Lignite	0,32
Without energy content	
Bauxite	0,59
Dolomite	0,21
Iron in ore	0,4
Iron oxides	21
Limestone	3,7
Sodium chloride	2,1
Copper in ore	1,9E-04
Zinc in ore	2,8E-04
Other	0,99
Renewable resources with energy content	
Wood	0,54
Hydropower	78 MJ
Windpower	0.088 MJ
Water use	
Water, total aggregated*	990000

* Includes water used for hydro power, but included for the sake of completeness.

Environmental impact potential

Emmission to air, water and soil

	Upstream	Core	Downstream	Total
Global warming (kg CO ₂ equivalents)	66	5,5	1,1	73
Acidification (mol H ⁺)	6,9	0,92	0,12	7,9
Ozone depletion (kg CFC-11 equivalents)	3,7E-05	3,3E-08	0	3,7E-05
Photochemical oxidant formation (kg ethene equivalents)	0,053	0,0031	0,0012	0,057
Eutrophication (kg O ₂)	1,4	0,19	0,039	1,6
Alternative units for acidification and eutrophication, included for comparability:				
Acidification (kg SO ₂ equivalents)	0,22	0,029	0,0039	0,25
Eutrophication (kg PO43 equivalents)	0,030	0,0041	0,00084	0,035

Non-hazardous and hazardous waste from cradle to gate

The recycling of the product is not included depending on local and national rules.

Hazardous waste	Non-hazardous waste
2.2 kg	40 kg

Maintenance

RH Chairs are built for long and problem-free usage. Normal use and cleaning means that the chair will achieve its maximum lifetime and maintain its proper ergonomic properties. The seat and back pad can be exchanged if they become worn or damaged. For stain guide, see www.rhchairs.com.

Recovery declaration

The RH Logic chair is 100-percent suited for recovery, divided into material recycling and incineration with energy recovery. The chairs are easily disassembled with all major components bearing clear material labels, enabling them to be sorted correctly for recycling. Packaging is also kept to a minimum and designed to be recycled. Plastics can be material recycled where systems exist for this.

Incineration with energy recovery	Material recycling
Other materials (wool, fabric, lacquer)	Steel Aluminium
Plastic	

Corrugated cardboard used for packaging is suitable for material recycling.

Incineration with energy recovery	Material recycling
PUR	Steel
Other materials (fabric, lacquer)	Aluminium Plastics *Wool

Corrugated cardboard used for packaging is suitable for material recycling.

* Wool can also be biodegradable.

Other environmental information

- The metals in our chairs can be recycled several times thereby lessening the environmental impact.
- Exchangeable pads.
The seat and backrest pads are easily exchanged, so there is no need to replace the whole chair just because the upholstery needs to be changed. This benefits the environment and extends the chair's lifetime..
- The cardboard packaging is made of 50% recycled material.
- No gluing processes are used in the upholstery.
- The seat includes wool – a natural fibre with the capacity to transport moisture and heat.

Certification

EPD Certification S-EP-00036

This certification is valid until 6 November 2013.

According to the requirements of the international EPD system, General Programme Instructions, version 1 - www.environdec.com.

The PCR for RH Logic 400 (Product Category rules (PCR) for Environmental Product Declaration (EPD): UN CPC Class 3811 Seats. Draft version dated 31 October 2008. The review was conducted by the Swedish Environmental Management Council (SEMCO) by an LCA expert panel (www.environdec.com) chaired by Sven-Olof Ryding (sven-olof@miljostyrning.se).

Independent verification of the declaration, according to ISO 14025:

internal external

The third party verifier, Bureau Veritas, has been accredited by the Swedish Authority for Conformity and Control (SWEDAC) EPDs within the same product category but from different programmes may not be comparable.
